

TRICYCLE FRANCHISING AND REGULATORY OFFICE

TFRO Integrated Management Information System

System Workflow and User Guide

A printable overview of how users enter the system, how records move between roles, and how franchise, renewal, change-motor, violation, payment, and administrative processes are completed.

City Government of Lucena · Workflow reference prepared from the implemented TFRO IMIS

1. From Access to Completed Service

Every transaction begins with authenticated access. The database profile determines the portal and permissions; records then move through submission, review, decision, notification, and audit.

Open TFRO IMIS

Landing page and public information

Register or Sign In

Credentials verified by Supabase Auth

Resolve Role

Server-controlled profile role

Open Role Portal

Only authorized pages and records

Process Transaction

Submit, review, verify, approve, or record

Update & Notify

Records synchronized and action logged

Admin / Staff

Review records

Verify evidence

Approve or return

System

Enforce
permissions

Synchronize data

Notify + audit

Authentication

A valid session identifies the user. Page guards redirect anyone without the required role.

Authorization

Database Row Level Security limits which records each role can read or change.

Accountability

Important actions are written to the audit log with user, role, action, and record context.

2. Login, Registration, and Role Routing

Enter Credentials

Email or assigned internal username

Credentials Valid?

Profile Active?

Read Profile Role

Route to Portal

YES — access granted

Admin → Dashboard · Staff → Violations · Operator → Operator Portal · Traffic Enforcer → Enforcer Portal.

NO — access denied

Show a safe error, clear invalid session state, and return the user to the login page.

Head Administrator

Full system supervision.

- Dashboard, records, approvals, reports, notifications, and audit log
- Create/delete restricted Administrators and TFRO Staff accounts
- Manage system settings and destructive actions

Restricted Administrator

Operational administration without destructive authority.

- View, add, edit, save, verify, and approve operational records
- Cannot delete/archive records
- Cannot manage accounts or system settings

TFRO Staff

Violation and payment processing.

- Encode and update violation records
- Verify payment evidence and record settlement/release
- Print official notices and payment-related forms

Operator

Self-service regulatory portal.

- Apply for a franchise and manage driver submissions
- Submit renewals and change-motor requests
- Upload requirements/receipts and receive notifications

Traffic Enforcer

Field enforcement portal.

- Search/verify drivers using QR information
- Create violation tickets and upload ticket photos
- Cannot record payments or access administration

3. New Franchise Application Workflow

The application is linked to a new franchise record, the tricycle record is created, and administrator/date information is stored.

REJECTED / NEEDS CORRECTION

The reviewer records a reason. The operator is notified and can correct the requirements according to the displayed status.

Required evidence

Voter's certificate, barangay clearance, cedula, OHCR, insurance, and PMBL certification.

Important rule

Submitting an application does not create an approved franchise. Creation happens only through the approval workflow.

Driver records

Operators submit driver details and pictures; authorized administrators review, assign, and verify compliance.

The application, documents, franchise, tricycle, operator, and notifications remain linked through database identifiers.

4. Franchise Renewal Workflow

Eligible Franchise

Operator selects a franchise due for renewal

Complete Renewal

Form answers and nine requirements

Submit for Review

Admin Verification

Documents, inspection, assessment, payment

Approve & Update MTOP

1 Operator checks eligibility

The selected franchise must be linked to the signed-in operator and allowed to renew.

2 Operator uploads requirements

Required documents and the 2x2 picture are validated by type and completeness.

3 Administrator reviews documents

Each requirement is marked verified, rejected, or requiring correction.

4 Administrator records assessment

Inspection results, fees, payment verification, and hard-copy requirements are recorded.

5 Administrator approves

Approval is allowed only when the required review conditions are satisfied.

6 System synchronizes franchise

The new expiration date is applied and the previous MTOP expiration is preserved.

COMPLETE

Renewal becomes approved, printable forms become available, franchise expiry is updated, and the operator receives a notification.

INCOMPLETE

The request stays pending/reviewing or is returned with remarks until the operator supplies acceptable requirements.

Control point

Approval should never be used to bypass missing documents, inspection results, assessment, or payment confirmation.

Printable output

The system can prepare renewal checklist and related official forms using the saved record.

Traceability

Submission attempts, reviewers, dates, verification results, and approval activity are retained.

Renewal processing preserves the former expiration value for historical comparison.

5. Change Motor / MTOP Workflow

Engine, chassis, plate, make/model, and related fields are updated. Previous values are copied to change-motor history before replacement.

REJECT

The current franchise and tricycle details remain unchanged. A rejection reason is stored and sent to the operator.

Why history matters

Old vehicle identifiers remain available for audit, investigation, and regulatory reference.

Operator visibility

The operator can track request status and receive the generated forms when the workflow allows them.

Do not edit directly

Vehicle replacement should pass through the request and approval flow so history is not lost.

Change Motor connects the operator request, franchise, tricycle, reviewer, history, forms, and notification.

6. Violation, Payment, and Vehicle Release

Driver / Unit Checked

Search records or verify QR

Issue Ticket

Select official violation and upload photo

Violation Pending

Submit Treasurer Receipt

Staff Verifies Payment

Paid / Released

Traffic Enforcer

Identify driver/unit

Encode ticket

Attach ticket image

Operator

View violation

Pay at authorized
office

Upload receipt
once

TFRO Staff

Inspect
paper/uploaded
receipt

Record receipt and
amount

Enter release
details

System

Link payment to
violation

Update status

Enable official
printouts

Available outputs

Notice of Violation, Order of Payment, and Unit Releasing Slip use the saved violation and payment details.

Separation of duties

Traffic Enforcers record tickets; TFRO Staff verify payment and release. Enforcers cannot create payment records.

Receipt control

Receipt submission is restricted and attributable to prevent replacement or duplicate payment evidence.

A violation is not considered settled until authorized TFRO Staff records and verifies its payment.

7. Administration, Notifications, Reports, and Audit

Operational Action

Create, update, verify, approve, reject, delete

Database Change

Audit Entry

User ID, role, action, target, time

Dashboard / Report

Management Review

Head Admin Opens Profile

System Settings → Account Credentials

Select an Account

Administrator, Staff, Operator, or Enforcer

Filter by User ID

Protected audit records only

View Account History

Newest 200 attributable actions

Account Management

- Head Admin creates restricted Admin and TFRO Staff credentials
- Head Admin can reset supported portal passwords
- Clicking an account opens its attributable activity history
- Deleting access preserves operational history where required

Notifications

- Approval, rejection, correction, expiry, and workflow messages
- Personal notifications are visible only to the intended account
- Read/unread state helps users track action items

Reports and Exports

- Filter operational records and review summaries
- Generate CSV exports and print official forms
- Dashboard totals summarize current database records

Audit and Security

- History shows date, action type, action, description, and affected record
- Account history is matched by protected user ID—not by display name
- Row Level Security protects records by role and ownership
- Service-role credentials remain inside server-side functions

Recommended daily operating sequence

1 Sign in with your own account

Never share credentials or leave a logged-in workstation unattended.

2 Review notifications and pending counts

Use the dashboard and portal notices to prioritize transactions.

3 Open the correct workflow page

Avoid direct database edits; use the UI process that preserves validation and history.

4 Verify evidence before deciding

Check uploaded documents, identities, receipts, and linked records.

5 Record clear remarks

Rejection, correction, inspection, and release notes should be specific.

6 Confirm the result and sign out

Check the updated status/notification, then securely end the session.

8. Where to Go in the System

Administrator Pages

- **Dashboard:** operational overview and pending totals
- **Applications:** review new franchise applications
- **Franchise / Operators / Drivers:** master records and assignments
- **Renewals / Motor Requests:** assess and decide requests
- **Violations / Payments:** monitoring and authorized operations
- **Reports / Audit Log:** oversight, export, and complete traceability
- **Profile → Account Credentials:** click an account to inspect its action history
- **Admin Users:** create/delete restricted Admin and TFRO Staff accounts

Operator Pages

- **Operator Portal:** franchise summary and service status
- **Apply for Franchise:** new application and document upload
- **Driver Submission:** add/update pending driver information
- **Renewal:** submit requirements and track review
- **Change Motor:** request replacement of vehicle details
- **Notifications / Profile:** messages and account information

TFRO Staff Pages

- **Violations:** encode and monitor cases
- **Payments:** verify receipt, record settlement, release unit
- **Profile:** personal account details and password
- Other pages appear only when the role is authorized by system policy.

Traffic Enforcer Pages

- **Enforcer Portal:** field ticket activity
- **Driver Verification:** scan QR or enter verification token
- **Violation Submission:** ticket data and supporting photo
- **Profile:** personal account details

Status meanings

Pending: waiting for action. **Reviewing:** assessment underway. **Approved/Paid:** required decision completed. **Rejected/Correction:** user action is required.

If something fails

Read the displayed message, verify your internet connection and role, refresh once, then report the record number and exact error to the Head Administrator.
